

MATTERHORN EXPLORER: Very large gas carrier

Shipbuilder:Hyundai Samho Heavy Industries Co., Ltd.
Vessel's name:
Owner/Operator: CCB Financial Leasing Co., Ltd / Trafigura
Country: China/Switzerland
Designer:Hyundai Samho Heavy Industries
Co., Ltd.
Country:Republic of Korea
Model test establishment used: Hyundai
Maritime Research Institute
Flag:Singapore
IMO number:
Total number of sister ships already completed
(excluding ship presented):
Total number of sister ships still on order: nil

Ordered in late 2017, the VLGC Matterhorn Explorer was handed over to commodity and energy trader Trafigura in May 2019 by Hyundai Samho Heavy Industries, as the first of a fourship series. The quartet which includes Eiger Explorer, Weisshorn Explorer and Dom Explorer delivered in June, August and September respectively, are the second series of ships built to the same design but the first ordered by Trafigura in conjunction with Asian partners.

in conjunction with Asian partners.

The order for the vessels came at the end of what was generally acknowledged as a difficult year in LPG trading, when the combination of new ship arrivals and a shortage of product halved average spot market rates. On the positive side for owners, newbuild prices in the sector were very attractive but rising.

Matterhorn Explorer's hull dimensions are designed around the old Panamax restrictions and are 229.98m length, 32.25m beam and 12.02m draught. The ship is fully refrigerated and has four tanks with a capacity of 80,000m³. It also has two deck storage tanks to hold the chemicals used for conditioning the cargo tanks. Cargo is pumped out by eight Svanehoj vertical deepwell pumps of 600m³/h capacity. Trafigura had decided before ordering the vessels that the 2020 sulphur rules would be met by

Trafigura had decided before ordering the vessels that the 2020 sulphur rules would be met by installation of a scrubber that would serve the main engine, auxiliaries and boiler. The scrubber is an Alfa Laval PureSox open-loop hybrid ready model with multiple inlets.

The main engine is a MAN B&W ultra-long stroke type 6G60ME-C9.5 with an output of 13,500kW which with the 7.2m propeller and Hi-Fin cap fin and a rudder bulb, allows for an efficient propulsion system and a maximum speed of 16.5knots and a service speed of 13.5knots.

Compliance with NOx Tier III levels is achieved using a high pressure selective catalytic reduction system.

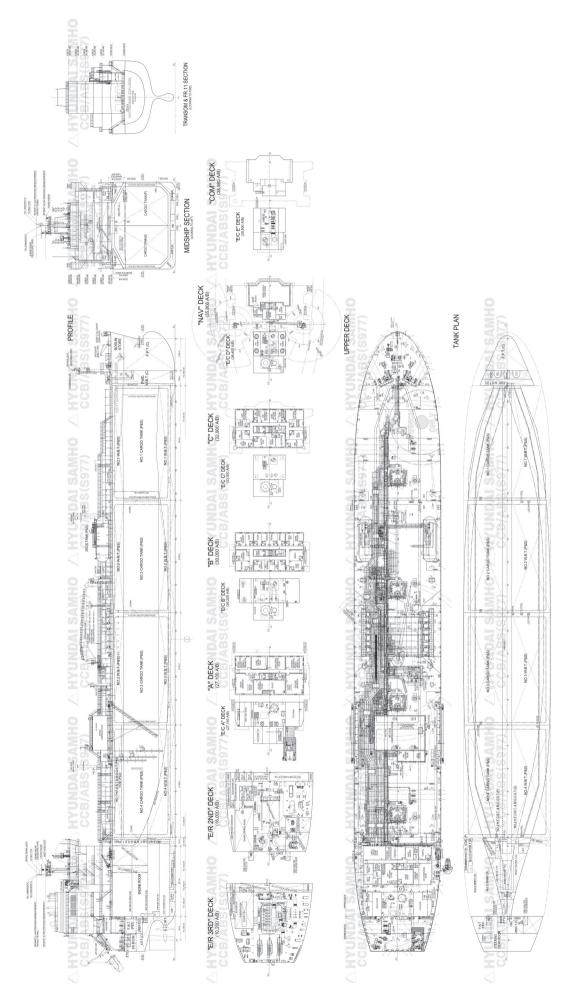

TECHNICAL PARTICULARS
